

Cabin Air Filter

The blower seems not blowing cold air in hot day. Most people suspect refrigerant. HVAC (Heating, Ventilation, and Air Conditioning) system became not blowing sufficient air (both cold and hot). The culprit was cabin air filter.

Recirculation filter (Up) and Cabin air filter (Down)

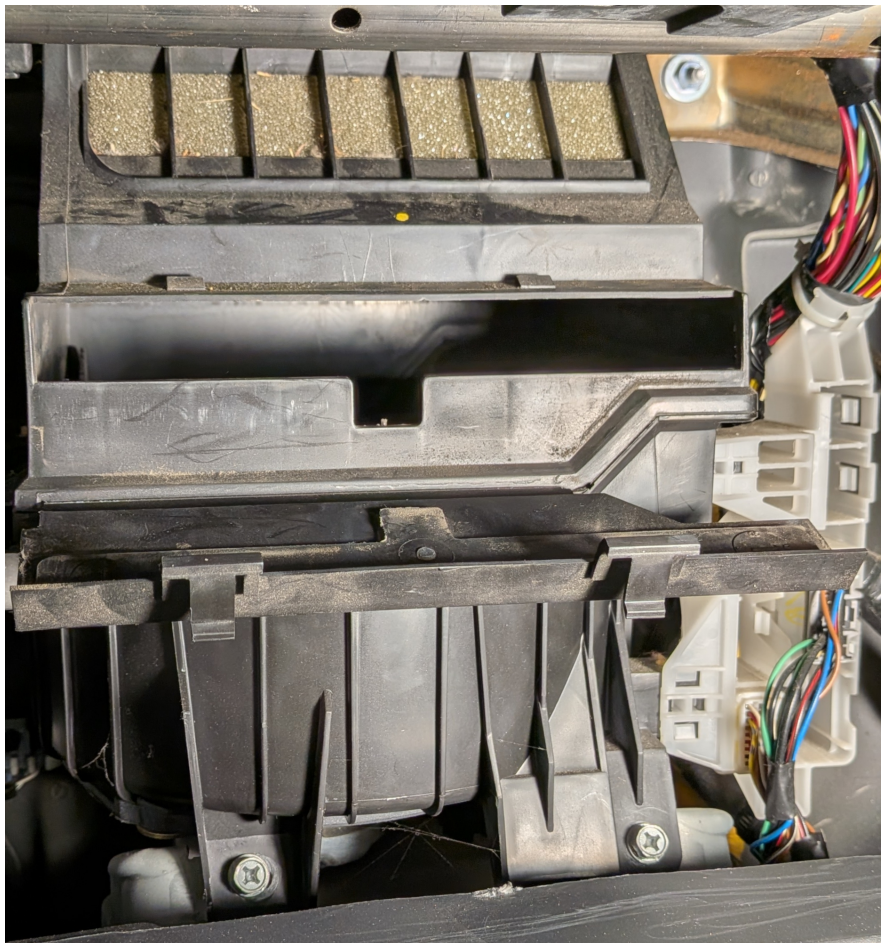

Cabin air filter extracted a portion

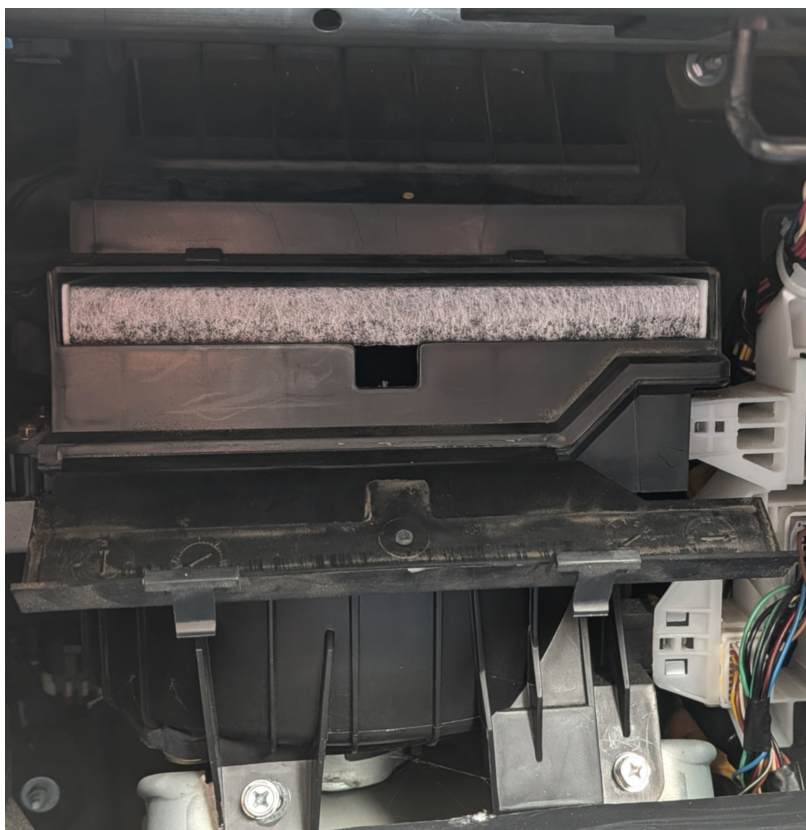

Cabin air filter extracted most portion

Dumped

Cleaned both recirculation and cabin air filter

New filter installed

Filter lid closed (Done; Flowing plenty cold air!)
