

Tips Watch Metal Band

Metal band for wrist watch needs to remove metal section block(s) to adjust the total length.

I had to remove one metal section block for each left & right band (total two) to get shorter length that fits my wrist circumference.

Only a metal section block with arrow mark pointing out circular prong (spring) to be pushed down can be detached and removed. Up to four metal blocks can be removed in this case.

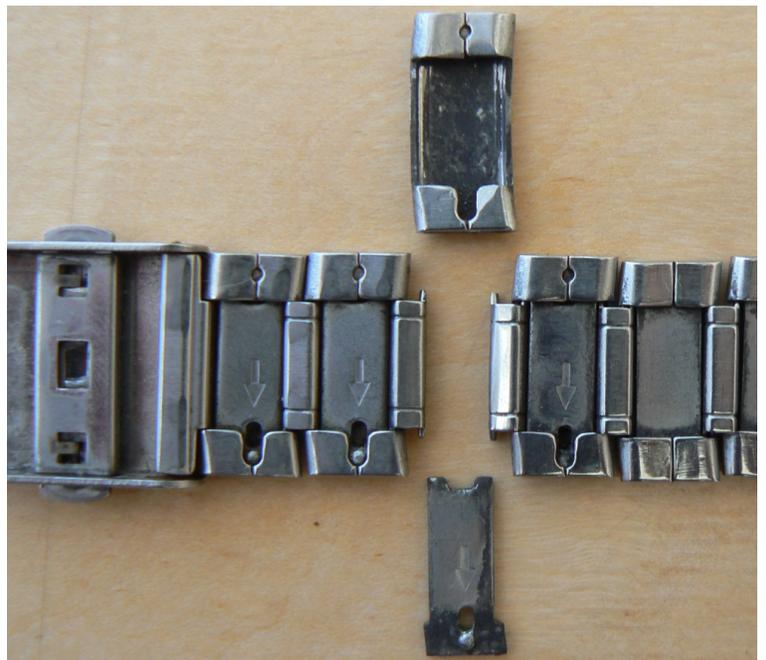

Tools

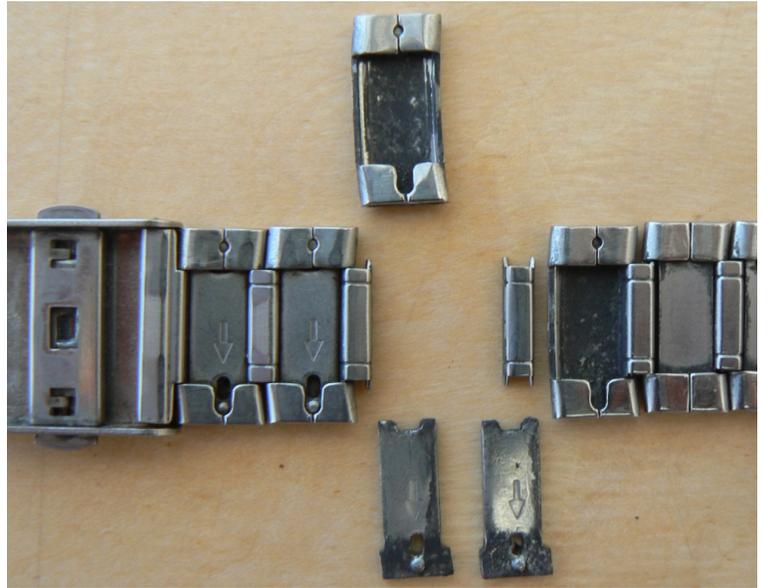

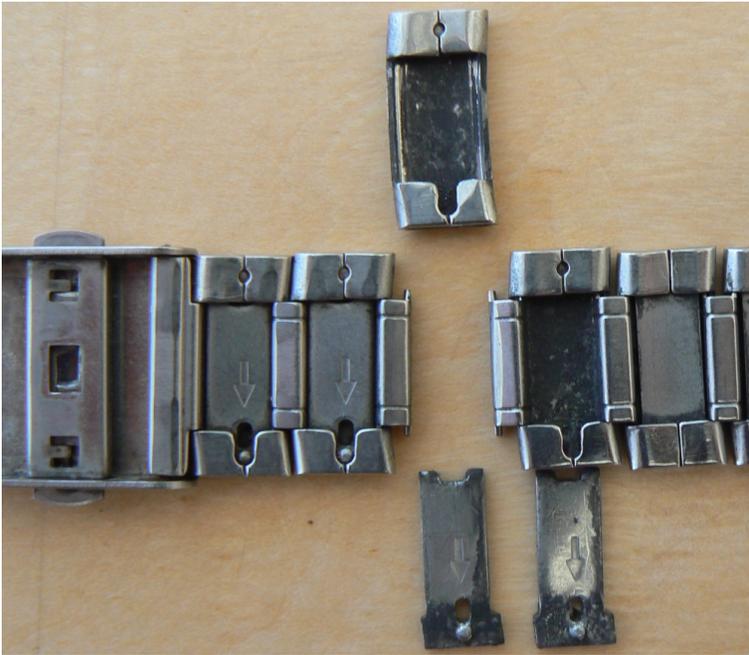

Before (4 Metal Section Blocks with Arrow)

After (3 Metal Section Blocks with Arrow)
